

Session Booklet – Location Services

Location services are a feature that allows an organisation access to your location whilst you are using the services the organisation offers. Ranging from apps telling you about the weather, tagging yourself in a location on a social media platform, getting directions from point A to point B using a maps app or finding your nearest McDonalds store, location services are becoming more and more prevalent when entering the digital world.

Location Services	
1	<p>Firstly, we are going to look at how to turn location services on our various devices.</p>
2	<p><u>Apple</u></p> <ol style="list-style-type: none"> 1. Open the Apple Settings app. 2. Scroll down and open the Privacy menu. 3. Location services will appear at the top of the screen. Next to location services is a switch. If the switch is green, then you have location services turned on. 4. To turn location services off, you would need to tap the switch. You'll know you've turned it off as the switch will turn to white.
3	<p><u>Android</u></p> <ol style="list-style-type: none"> 1. Open the Android Settings app. 2. Scroll down and tap on Location. 3. Scroll down and tap Google Location Settings. 4. Tap Location Reporting and Location History. 5. Here you will see different sliders. These will allow you to turn off location reporting and delete any location history your device has saved.

<p>4</p>	<p><u>Windows</u></p> <ol style="list-style-type: none"> 1. Go to the Start option in the bottom left hand corner and left-click the Windows menu icon. 2. To view Settings, you then need to click the Settings cog. 3. Within Settings, there is a Privacy icon. 4. Within Privacy, there is a Location switch. This switch can be turned on and off depending on if you want Location services on or not. 	 <p>The screenshot shows the Windows Settings application with the 'Location' page selected. The 'Location' toggle switch is turned on. The page includes sections for 'Location for this device', 'Default location', and 'Location history'.</p>
<p>5</p>	<p>Often when you are using apps that require location services, and they aren't switched on in your settings, the app will ask you to allow them access to your location. The image on the right shows the Maps app asking for permission to access your location.</p> <p>It isn't as simple as just allowing it to access your location though. It is worth checking your location services within Settings and checking what level of access you have granted the app.</p> <p>Common levels of access are Never, Whilst Using the App and Always.</p>	 <p>The screenshot shows an iPhone screen with the Maps app open. A dialog box is displayed in the foreground asking for permission to access location services. The dialog text reads: 'Allow "Maps" to access your location while you are using the app? Your current location will be displayed on the map and used for directions, nearby search results, and estimated travel times.' There are 'Don't Allow' and 'Allow' buttons at the bottom of the dialog.</p>
<p><u>Question</u></p>	<p>What is the difference between Never, Whilst Using and Always?</p>
