

History on your device

This week we are going to look at History on your devices. In computing, the **web browsing history** is the list of web pages that you have recently looked at, its also data such as page title and time of visit Web browsers do this in order to provide you with a back button and a history list to go back to pages, you have visited previously.

	Each week we provide the step by step instructions on how to complete set tasks. This week is very different.		
	You are all using different devices and the history is stored in different places.		
	We want you to have control over how you learn new processes.		
	So, with the help and support of Ryan, Julie and our wonderful volunteers you are going to learn about the history on your device and make notes on how to look at it & delete if you want to. We have left some blank boxes for you to write the steps in. Draw an illustration if it helps for you to complete the step.		
Q	What device do you use?	A	
Q	What browser do you use to search the internet?	A	
Q	Do you know why there is history on your device?	A	
How to locate where the history is and look at it			
1.	Open your internet browser
